

GigResource Platform

Developer Feedback & Fix Document

Version 1.1 | June 2026 | Prepared by: Khadija (Project Manager)

REVIEW COPY — every item below is annotated with its **fix status** and the **exact URL** to test it. Base URL: <https://gigresource.com>. Log in as a **Client** for client pages and a **Professional** for professional pages.

Legend: **DONE** = live & testable now **AT LAUNCH** = built, needs an API account/key **DECISION** = your team's call

Overview

This document consolidates all current feedback, bug reports, compliance concerns, and feature updates for the GigResource platform. It covers the Landing Page, Client Dashboard, and Professional Dashboard. Issues are organized by priority and include Peter Zylstra's latest comments from team discussions.

Priority	Category	Items	Status
Critical	Role Logic, Compliance, Navigation	8	All addressed
High	Branding & Color Consistency	3	All addressed
Medium	UI/UX, Missing Features	6	All addressed
Ongoing	Legal, Pricing, Registration	5	Done / launch-gated

SECTION 1 — Critical: Trust, Legal & Compliance

1.1 Remove Misleading Landing Page Metrics

Remove inaccurate figures ("25,000+ verified professionals", "150,000+ events completed", "\$50M+ paid") that expose the platform to legal risk; replace with approved value copy.

DONE | **Where:** [/](#) and </register>

All fake counts removed sitewide; replaced with value-driven copy.

1.2 Platform Liability Disclaimer — Required Copy Updates

- Admin is NOT available 24/7 — remove any such claim
- Background checks NOT guaranteed unless paid separately
- Data privacy varies with third-party integrations — platform can't control third-party use
- No guarantees on membership outcomes
- No expert advice, recommendations, or managed negotiations

DONE | **Where:** </platform-disclaimer> + onboarding notice on </register>

New Platform Disclaimer page + disclaimer shown above the sign-up button; banned claims removed from all copy.

1.3 DMCA & Image Upload Compliance

- Add a DMCA Takedown Policy page
- Add a rights-confirmation checkbox at upload
- Backend process for valid takedown notices
- Log flagged images with timestamp + user ID

DONE | **Where:** </dmca-policy> + upload prompt on </professional/profile>

Policy page + takedown form + rights-confirm prompt on avatar/cover upload, with logging.

SECTION 2 — Critical: Role-Based Access & Feature Placement

2.1 Professional Dashboard — Remove ‘Create New Job’

Professionals can browse jobs, submit proposals, track bids and manage projects — but CANNOT create jobs, and cannot reach job-posting routes by direct URL (route protection).

DONE | Where: </professional/dashboard>

“Create New Job” removed; job-posting routes blocked for professionals (redirect on direct URL).

2.2 Move ‘Bid Intelligence’ to Professional Dashboard

Bid Intelligence is a professional tool — remove from Client dashboard and add to Professional dashboard with correct permissions. Clients cannot access it.

DONE | Where: </professional/bid-intelligence>

Now Professional-only; removed from the Client dashboard.

SECTION 3 — Critical: Broken Navigation & Routing

3.1 Notification Settings — Incorrect Redirect

Previously redirected to the Profile page. Create a dedicated Notification Preferences page with Email, Push and SMS toggles.

DONE | Where: </client/notifications> · </professional/notifications>

Dedicated standalone page (not a profile tab) with Email + Push + SMS toggles.

3.2 ‘Go to Full Calendar’ Button — Incorrect Redirect

Previously redirected to My Gigs. Should open a dedicated Full Calendar view with milestones, deadlines and upcoming tasks.

DONE | Where: </professional/calendar>

Button now opens the dedicated calendar view.

3.3 Unlabeled Button — Dead Link

Identify the destination, add a label/tooltip, or remove if redundant.

DONE | Where: </professional/dashboard> & </client/dashboard>

Resolved — every button now has a clear label/destination.

SECTION 4 — High: Branding & Color Consistency

4.1 Dashboard Theme Colors

Client Dashboard = Orange (all sidebar/UI); Professional Dashboard = Blue, consistent across all pages. Users should identify their role context by colour.

DONE | Where: </client/dashboard> (orange) · </professional/dashboard> (blue)

Orange enforced for Client, Blue verified for Professional across all pages.

4.2 Standardize Button Colors

Define a global button colour palette (Orange = Client, Blue = Professional), allow sizes to vary, and document a button style guide for the team.

DONE | **Where:** Repo doc: docs/button-style-guide.md
Style guide documents role colour (fixed) + size variants + variants + checklist.

SECTION 5 — Medium: Missing Global Features

5.1 Logout Functionality

Add Log Out to the avatar dropdown AND the bottom of the sidebar, on both dashboards.

DONE | **Where:** Avatar dropdown + sidebar bottom — both dashboards
Log Out present in both locations on Client and Professional.

5.2 Dark / Light Mode Toggle

Add a theme switcher to the header; implement Light and Dark mode; persist the preference.

DONE | **Where:** Top bar (near profile) — both dashboards
Toggle implemented; preference persists across sessions.

SECTION 6 — Medium: UI/UX & Layout Improvements

6.1 Threads Page Spacing

Add consistent padding inside thread cards and margins between cards/messages; improve readability.

DONE | **Where:** [/professional/threads](#) (and client messages)
Spacing + hierarchy fixed.

6.2 Alignment & Grid Consistency

Unify the grid/flex layout; standardise card spacing, padding, margins and text alignment across all dashboard pages.

DONE | **Where:** Both dashboards
Consistent alignment across pages.

6.3 Invisible Divider / Border

Review border colour/opacity so section dividers render visibly.

DONE | **Where:** Both dashboards
Dividers now visible.

SECTION 7 — Ongoing: Registration, Geo-Verification & Address

7.1 Geographic Restriction — Target States

Limit to MD, VA, DC, DE, PA, NJ, NY. Professionals pick from a hardcoded state dropdown; clients are blocked if their zip code is outside the 7 states.

DONE | **Where:** [/register](#)
State dropdown (professionals) + zip validation (clients); out-of-area zip rejected.

7.2 Recommended Geolocation Strategy (Hybrid)

Layered: (1) session/cookie, (2) browser HTML5 geolocation, (3) IP fallback via MaxMind GeoLite2 / Cloudflare headers.

BUILT — ACTIVATES AT LAUNCH | **Where:** Backend: GeolocationService
Session + Cloudflare-region steps are live; MaxMind IP + HTML5 reverse-geocode activate at launch with a free MaxMind key.

7.3 Address Verification — Risk-Based Process

- Professionals/businesses: validate address (USPS/Google), match business name (KYB/Places), assign status label
- Clients/residents: frictionless signup; full address only at booking, stored encrypted, hidden until confirmed
- Status labels: Address Verified, Business Match Confirmed, Needs Correction, Manual Review Required, Registration Blocked, Private-Hidden

BUILT — ACTIVATES AT LAUNCH | **Where:** [/professional/profile](#) → “Business Address Verification” card
Full risk-based flow + status labels built. Free filter is live now; the paid USPS/Google match activates at launch with an API account.

7.4 API Cost Control — Hard Lock on Attempts

- Layer 1 (free): reject blank/PO Box/fake before any paid call
- Layer 2 (paid): max 2 attempts — attempt 1 fail = Needs Correction, attempt 2 = Manual Review (locked)
- Trigger paid verification after payment clears where possible

BUILT — ACTIVATES AT LAUNCH | **Where:** Same card as 7.3
Free Layer-1 filter live now (PO Box/blank/junk blocked, no API call). 2-attempt cap + lockout wired; paid call go-live-gated.

7.5 PO Box & Home Address Edge Cases

- Don't block home addresses — flag for manual review
- Block PO Boxes at the free front-end filter (no paid call)
- Home business → prompt for business license / state registration

DONE | **Where:** Same card as 7.3
PO Box blocking + home-address flagging are live now (free layer); business-license prompt noted on the card.

SECTION 8 — Ongoing: Pricing, Fees & Membership Tiers

8.1 Open Questions from Peter

\$29/mo feasibility vs chargebacks; competitor comparison (Bark, Thumbtack, GigSalad); verification fee + commission schedule; tier feature/rate confirmation.

BUSINESS DECISION | **Where:** —
These are business decisions for your team, not code changes — awaiting your answers.

8.2 Influencer Commission Rate Update

Reduced rates: Tier 1 = 5%, Tier 2 = 7.5%, Tier 3 = 10%, Tier 4 = 12.5%.

DONE | **Where:** [/join-as-influencer](#)
Rates updated to 5 / 7.5 / 10 / 12.5%.

8.3 AI Tools by Membership Level

Document all AI tools and assign to tiers; higher tiers unlock more advanced AI; replace any human-managed-advice copy with AI framing.

DONE | **Where:** [/app/membership-plans](#) (+ the AI tool pages)

Tier matrix: Starter = AI Review Writer (10/mo); Professional = + Budget Allocator & Vendor Matchmaking (30/mo); Enterprise = all unlimited. Shown on the plans page.

SECTION 9 — Recommended Implementation Order

Phase	Focus	Status
1	Role logic — remove Create Job, move Bid Intelligence, route protection	Done
2	Compliance — remove metrics, disclaimer copy, DMCA	Done
3	Navigation — notification + calendar redirects, unlabeled button	Done
4	Missing features — logout, dark/light, button colours	Done
5	UX — threads spacing, grid alignment, dividers	Done
6	Visual QA — client orange, professional blue, responsive	Done
7	Registration — geo-restriction (done), address verification (built, launch-gated)	Done / Launch

Bottom line: every item buildable without an external paid account is **done and live**. The launch-gated pieces (§7.2–7.5 paid steps) only need the USPS / Google / MaxMind accounts; §8.1 needs your team's pricing answers.
